

1 / 20 | Ages 9-12 | 30 minutes

Invent a five-minute board game

What we are practising

Turn an idea into explicit rules and revise after observing play.

What you need

Paper / Pencil / Two large paper counters

Use crossed-out marks instead of movable counters.

Before you begin

Draw a track of twelve spaces with a start and finish.

Use large counters, avoid gambling or real prizes, and let players stop freely.

Try it together

1. Choose a turn rule, such as move one or two spaces, and an exact winning condition.
2. Add one optional decision, such as a shortcut that costs the next turn.
3. Play a short round with a partner and note questions about the rules.
4. Revise one rule, then play again and compare.

Talk, draw or show your idea

Could a player get stuck forever or be unable to make a legal move?

Space to explore

2 / 20 | Ages 9-12 | 30 minutes

A comic without words

What we are practising

Communicate a sequence without relying on dialogue or captions.

What you need

Paper / Pencil

Arrange four quick sketches instead of polished drawings.

Before you begin

Divide a sheet into four panels and choose a harmless problem, such as a rolling pencil.

Keep the story fictional and avoid sharing identifying drawings of real children.

Try it together

1. Show the setting and object in panel one.
2. Show a cause and a consequence in panels two and three.
3. Resolve or develop the situation in panel four.
4. Ask a reader to retell the story and revise an unclear visual clue.

Talk, draw or show your idea

What does the reader need to see to understand why the next event happens?

Space to explore

3 / 20 | Ages 9-12 | 30 minutes

One-sheet standing sculpture

What we are practising

Explore how shape and base size affect a simple design.

What you need

One sheet of paper / Pencil / Ruler if available

Use two equal half-sheets for two smaller designs.

Before you begin

Choose a clear flat table and set the constraint: no tape, glue or cutting.

Keep models on a low table and avoid standing on furniture to measure or display them.

Try it together

1. Sketch two ways folds might make the sheet stand.
2. Build one version and check whether it stands for ten seconds.
3. Change a fold or widen the base, then test again.
4. Record the design's height and describe the most useful change.

Talk, draw or show your idea

Can a taller sculpture also be stable, and what tradeoff appears?

Space to explore

4 / 20 | Ages 9-12 | 30 minutes

A sign everyone can read

What we are practising

Use visual hierarchy, contrast and testing to improve communication.

What you need

Paper / Dark pencil or pen

Describe the sign aloud and ask a partner to sketch it.

Before you begin

Choose a fictional sign purpose, such as quiet reading corner or return books here.

Use pretend locations; do not replace real safety signs or claim universal accessibility from one test.

Try it together

1. Draw one large symbol and a short label.
2. Make the main message stand out using size and empty space.
3. Show it to a partner without explaining and ask what it means.
4. Revise confusing details and test from a little farther away.

Talk, draw or show your idea

Would the message still work without colour?

Space to explore

5 / 20 | Ages 9-12 | 20 minutes

A scene made of sounds

What we are practising

Select and arrange sound details to imply a setting and change.

What you need

No materials

Use written sound words or silent gestures instead.

Before you begin

Choose a setting such as a calm rainy garden, keeping the sound level comfortable.

Avoid loud or sudden sounds and offer a silent version to anyone who prefers it.

Try it together

1. List three possible sounds, such as fingertip rain, a soft bird whistle and a rustling hand motion.
2. Arrange a beginning, a change and an ending using the sounds.
3. Perform the scene for about thirty seconds without naming the setting.
4. Ask a listener what they imagined, then revise one sound or pause.

Talk, draw or show your idea

Which sound suggested the setting most clearly?

Space to explore

6 / 20 | Ages 9-12 | 15 minutes

Make a poster request clearer

What we are practising

Turn a vague poster request into visible design choices and a useful question.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Turn a vague school-club poster request into clear choices.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

A school club asks for a poster that is “exciting but simple.” What two design choices and one question would make that request easier to follow?

Space to explore

7 / 20 | Ages 9-12 | 15 minutes

An ending earned by an earlier clue

What we are practising

Foreshadow a fictional solution with an earlier relevant clue.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Write an early clue that supports a later fictional resolution.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

A fictional explorer finds a sealed door and later opens it with a song. What earlier clue could make that ending feel earned?

Space to explore

8 / 20 | Ages 9-12 | 15 minutes

A narrator who misses a detail

What we are practising

Use differences between words and pictures to create a reader discovery.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Design a word-and-picture mismatch that creates a fair fictional clue.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

A narrator says a room is empty, but the illustration shows a small tail behind a chair. How could this difference invite a reader's discovery?

Space to explore

9 / 20 | Ages 9-12 | 15 minutes

A poster with only three shapes

What we are practising

Communicate a setting through arrangement under a strict shape limit.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Compose a fictional event image from exactly three shapes.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Using only a circle, a triangle and a rectangle, suggest a fictional night-time concert. How will arrangement carry the idea?

Space to explore

10 / 20 | Ages 9-12 | 15 minutes

An invention with a drawback

What we are practising

Give an imaginary invention a limitation that drives story choices.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Give an imaginary device a benefit and a consequential limitation.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Invent a story umbrella that stores sunshine for cloudy days. What limitation would make it more interesting than a perfect device?

Space to explore

11 / 20 | Ages 9-12 | 15 minutes

One rule for an invented world

What we are practising

Derive consistent consequences from an invented world rule.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Derive two story consequences from one imaginary rule.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

In your fictional town, shadows can carry messages only at noon. What two consequences would follow if this rule stays consistent?

Space to explore

12 / 20 | Ages 9-12 | 15 minutes

One event in two genres

What we are practising

Compare how genre changes emphasis around the same fictional event.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Write two short openings for the same fictional event.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

A character finds a ticking box on a fictional library shelf. How could you frame the same harmless event as comedy and as mystery?

Space to explore

13 / 20 | Ages 9-12 | 15 minutes

Wide shot, close detail

What we are practising

Choose shot scale to reveal context and an important detail.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Plan a wide view and close-up for one fictional discovery.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Storyboard a character discovering a tiny key in a crowded workshop. Which information belongs in a wide view and which in a close-up?

Space to explore

14 / 20 | Ages 9-12 | 15 minutes

A line break changes the pause

What we are practising

Explore how line breaks affect emphasis in a short poem.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Place and compare a line break in a short invented poem.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Write a two-line poem about a slowly opening door. Where could a line break create a pause before the surprising detail?

Space to explore

15 / 20 | Ages 9-12 | 15 minutes

Numbers as a visual rhythm

What we are practising

Turn an invented number sequence into an explicit visual rule.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Translate an invented number sequence into a repeated visual rule.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Use the invented sequence 1, 3, 2, 4 to inspire an artwork. How can each number control a feature without presenting it as real data?

Space to explore

16 / 20 | Ages 9-12 | 15 minutes

Revision with a visible reason

What we are practising

Evaluate a single visual revision against its intended effect.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Sketch two versions that test one visual-priority change.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Your first illustration hides the main character among many decorations. Which single change could help, and how would you compare versions?

Space to explore

17 / 20 | Ages 9-12 | 15 minutes

A stage that lets the story move

What we are practising

Arrange fictional scenery to support a sequence of character movements.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Plan fictional entrances, a meeting point and an exit on paper.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Draw a stage plan where two fictional characters must enter separately, meet by a tree and leave together. How should scenery leave room for the action?

Space to explore

18 / 20 | Ages 9-12 | 15 minutes

Describe an artwork without interpreting it first

What we are practising

Distinguish a visual description from a personal interpretation.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Describe an invented composition before adding your interpretation.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Invent an abstract artwork and write a brief description for someone who cannot see your drawing. What should come before your personal interpretation?

Space to explore

19 / 20 | Ages 9-12 | 15 minutes

A branching story with a shared ending

What we are practising

Make a story choice matter even when its branches share an ending.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Draw two story branches that rejoin with distinct consequences.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

Create a paper story where the reader chooses a forest path or a river path, but both reach a festival.
How can the choice still matter?

Space to explore

20 / 20 | Ages 9-12 | 15 minutes

Borrow a principle, invent a use

What we are practising

Transfer a useful design principle to a different imagined purpose.

What you need

Paper / Pencil

Describe or gesture your idea while a partner draws or writes.

Before you begin

Read the question aloud together. Use imagined people and places.

Keep examples fictional and participation voluntary; an adult can help read or act a role.

Try it together

1. Transfer one folding principle into a different fictional tool.
2. Show or say your first answer before reading the example.
3. Explain one choice, then try the extra challenge if you wish.

Talk, draw or show your idea

An accordion folds into a compact shape. How could that folding idea inspire an imaginary reading tool without copying an accordion itself?

Space to explore

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

1. Invent a five-minute board game

A little hint

Decide what happens if a move would pass the finish before play begins.

Answer / what to notice

Many designs work if players can understand turns, legal moves and how the game ends.

Playtesting reveals unclear rules and unintended loops that are hard to notice in a sketch.

Make it easier

Use a straight track with only one turn rule.

Take it further

Make a cooperative version where both players work toward a shared goal.

Another day, away from the screen

Write a one-page rule sheet and let another pair try without coaching.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

2. A comic without words

A little hint

Repeating a distinctive object helps the reader track it across panels.

Answer / what to notice

A successful sequence lets a reader explain the main events without added narration; simple stick figures are enough.

Readers infer movement and time from differences between successive pictures.

Make it easier

Use three panels: before, problem and after.

Take it further

Tell the same story from a different camera viewpoint without changing events.

Another day, away from the screen

Create an alternative ending and compare how it changes the meaning.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

3. One-sheet standing sculpture

A little hint

A wider base often helps, while using more paper in the base may reduce height.

Answer / what to notice

Many folded forms work; success means standing unaided under the chosen conditions, not reaching a fixed height.

Folds change stiffness and where the paper's weight is supported; the base must support the whole form.

Make it easier

Make a simple tent fold and compare two opening widths.

Take it further

Design for both a minimum height and a maximum base width you choose in advance.

Another day, away from the screen

Draw a labelled museum card explaining the sculpture's construction.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

4. A sign everyone can read

A little hint

Pair an understandable shape with words instead of relying on colour alone.

Answer / what to notice

A useful sign communicates its intended action clearly; testing may show that the first symbol needs a better label.

A symbol is not automatically universal; readable words and user feedback reduce ambiguity.

Make it easier

Improve an adult-drawn sign by enlarging its key words.

Take it further

Make matching Arabic and English versions and adjust reading direction naturally.

Another day, away from the screen

Create a consistent set of three signs for an imaginary library.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

5. A scene made of sounds

A little hint

A gradual change from frequent taps to silence can suggest rain stopping.

Answer / what to notice

Different listeners may imagine different places; explain the intended clues and accept reasonable interpretations.

Sequence, loudness and silence can communicate change without spoken narration.

Make it easier

Use two sounds and let an adult narrate.

Take it further

Create two contrasting scenes using exactly the same three sound sources.

Another day, away from the screen

Write a sound score with symbols another person could perform.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

6. Make a poster request clearer

A little hint

Separate a possible design from a fact you still need.

Answer / what to notice

Example answer: Use one large focal image and a short heading; ask who should notice the poster and what they should do. Other reasoned ideas can work.

Turning adjectives into visible choices still requires knowing audience and purpose.

Make it easier

Clarify one adjective with two contrasting sketches.

Take it further

Rewrite the poster request after inventing the school club's answer.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

7. An ending earned by an earlier clue

A little hint

Plant a clue without revealing the whole solution.

Answer / what to notice

Example answer: Earlier, a carved musical pattern could glow when the explorer hums part of the tune. Other reasoned ideas can work.

Foreshadowing connects a later solution to information already available.

Make it easier

Choose the musical clue: a carved tune or an ordinary plain stone.

Take it further

Make the clue useful on a reread but easy to overlook at first.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

8. A narrator who misses a detail

A little hint

Keep the narrator's limited viewpoint clear.

Answer / what to notice

Example answer: The words report what the narrator noticed while the picture gives the reader an extra clue. Other reasoned ideas can work.

Words and images can offer different amounts of information without requiring either to explain everything.

Make it easier

Add one overlooked detail to a simple scene.

Take it further

Show when the narrator finally notices the same clue.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

9. A poster with only three shapes

A little hint

Assign each shape a role before arranging it.

Answer / what to notice

Example answer: A circle as moon, triangle as spotlight and rectangle as stage can suggest the setting. Other reasoned ideas can work.

Strict limits shift attention toward position, scale and relationships.

Make it easier

Use two of the shapes to suggest a stage and moon.

Take it further

Keep the same shapes but suggest a daytime event instead.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

10. An invention with a drawback

A little hint

Link the drawback to a decision in the story.

Answer / what to notice

Example answer: It might hold only one hour of light, forcing the character to choose when to use it. Other reasoned ideas can work.

A meaningful limitation creates choices and consequences inside a fictional world.

Make it easier

Choose between a limited duration and limited capacity.

Take it further

Write a scene where the character uses the limitation creatively.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

11. One rule for an invented world

A little hint

Consider both an opportunity and a problem created by the rule.

Answer / what to notice

Example answer: Characters would prepare messages beforehand and wait until the next noon if they miss the moment. Other reasoned ideas can work.

Consistent world rules help readers predict possibilities and understand obstacles.

Make it easier

Describe what happens just before noon.

Take it further

Introduce an exception only if you explain its limits clearly.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

12. One event in two genres

A little hint

Change the information order, not the harmless object.

Answer / what to notice

Example answer: Comedy might reveal a clock that tells jokes; mystery might delay showing the clock while following clues. Other reasoned ideas can work.

Genre can change pacing and emphasis while core events remain the same.

Make it easier

Choose one comic detail and one question-raising detail.

Take it further

Compare the endings and explain how each fulfils its opening.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

13. Wide shot, close detail

A little hint

Decide what viewers need to understand before the discovery.

Answer / what to notice

Example answer: A wide view shows the workshop and character; a close-up reveals the key under a paper corner. Other reasoned ideas can work.

Shot scale controls how much context and detail an audience receives.

Make it easier

Draw the key first and then its surrounding location.

Take it further

Reverse the shot order and describe the changed effect.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

14. A line break changes the pause

A little hint

Move the break and read both versions aloud.

Answer / what to notice

Example answer: “The door opened slowly / and a tiny moon rolled out” delays the unexpected moon until the second line. Other reasoned ideas can work.

Line breaks can guide emphasis and pacing, though readers may voice them differently.

Make it easier

An adult marks two possible line breaks in your sentence; choose one.

Take it further

Keep the words identical and explain how the layout changes emphasis.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

15. Numbers as a visual rhythm

A little hint

Choose one feature the numbers control consistently.

Answer / what to notice

Example answer: Each number could set the count of marks in a group, with a note that the sequence is invented. Other reasoned ideas can work.

A numerical constraint can organise art without making a factual claim about the world.

Make it easier

Use only the first two groups.

Take it further

Create another artwork where the numbers control spacing instead of count.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

16. Revision with a visible reason

A little hint

Change one prominent feature before changing everything.

Answer / what to notice

Example answer: I could reduce nearby decoration and ask a viewer what they notice first in each version. Other reasoned ideas can work.

A specific revision tied to an intended effect makes comparison more informative.

Make it easier

Circle the intended main feature first.

Take it further

Record a viewer's interpretation without assuming it matches your intention.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

17. A stage that lets the story move

A little hint

Trace each character's route before decorating.

Answer / what to notice

Example answer: Keep two entry paths clear and a shared exit route around the tree instead of blocking the centre. Other reasoned ideas can work.

A performance setting supports the sequence of actions as well as its appearance.

Make it easier

Use one entrance and one meeting place.

Take it further

Add a scenery change and show when the paths remain usable.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

18. Describe an artwork without interpreting it first

A little hint

Distinguish what is drawn from what it means to you.

Answer / what to notice

Example answer: Describe the large shapes, positions and contrasts first, then clearly say “It reminds me of...” for an interpretation. Other reasoned ideas can work.

Separating description from interpretation lets the listener form their own response.

Make it easier

Describe two shapes and where they sit.

Take it further

Ask a listener which spatial relationship still needs explanation.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

19. A branching story with a shared ending

A little hint

Carry one consequence of each route into the final scene.

Answer / what to notice

Example answer: Each route could bring a different companion or gift that changes a scene at the festival. Other reasoned ideas can work.

A branch can affect the experience even when the destination is shared.

Make it easier

Give each path one different event.

Take it further

Check that both branches provide enough information for the shared ending.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.

For the grown-up

Use these prompts when useful. Open-ended activities can have many good answers. Let your child explain their thinking.

20. Borrow a principle, invent a use

A little hint

Borrow expansion and compact storage, not the musical function.

Answer / what to notice

Example answer: A fold-out reading guide could expand to show several notes and fold small when put away. Other reasoned ideas can work.

Design by analogy transfers a useful principle to a different purpose.

Make it easier

Draw the tool open and closed.

Take it further

Name a limitation your design would need to address if built.

Another day, away from the screen

Keep your drawing and ask a partner to invent a different solution to the same question.
